

AEGIS — Malware Scanning Test Document

Benign PDF for validating the quarantine → scan → release workflow

Purpose

This document is intentionally harmless and is designed to test the AEGIS document security pipeline. A successful test should upload this PDF to quarantine, scan it with ClamAV, report a CLEAN result, verify its SHA-256 hash, release it to private evidence storage, and make it available only to an authorized user.

Expected Security Result

Pipeline Stage	Expected Result
File validation	PASS
Quarantine upload	SUCCESS
ClamAV scan	CLEAN
SHA-256 calculation	SUCCESS
Release verification	HASH MATCH
Evidence/document version	ACTIVATED
Security status	RELEASED
Authorized preview/download	ALLOWED

Test Metadata

Test ID: AEGIS-CLEAN-PDF-001

File type: PDF

Classification: Benign test artifact

Malware payload: None

Important

This is a clean-file test only. It does not contain malware and should not be used as an infected-file test. For the infected-path test, use the standard EICAR test file in a controlled development environment rather than real malware.
